Dr. Zhao is currently taking a PhD program at the Chinese University of Hong Kong under the supervision of Prof. Calvin Ng after he had received his MD degree and thoracic surgical training in Sun Yat-Sen University Cancer Center, Guangzhou, China. His main interest is minimally-invasive and personalised surgical treatment for early-stage lung cancer, and he has published several peer-review articles discussing whether the new classification of adenocarcinoma, especially the solid and micropapillary components, would have positive impacts on the choice of surgical modalities. Currently, he and Prof. Calvin Ng are running a project which hopes to identify such components intraoperatively that would help operational decision-making in the future.
